Training theme:	**NPMS Introduction to Bog and Wet Heath**
Theme Aims:	This NPMS Introduction to Bog and Wet Heath habitats aims to give you a good understanding of the vegetation in this broad NPMS habitat, especially in terms of: • the definition of the habitat and its three subdivisions, • the main vascular plant species present, • the range of floristic variation, and • an appreciation of the range and variety of ecological interest.
After following this presentation, you should:	Have a better understanding of bog and wet heath habitats and the vegetation and flora within in the UK. With a particular focus on the individual NPMS indicator species.

Please feel free to fill out the below questions to keep for your own development records.

I have enjoyed finding out about:	
Key things I have learned through following these materials:	
Areas I am more confident in following this course:	
Areas I am still not confident and would like more information/experience:
